No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 8, Application US/10177390
Publication No. US20030143743A1
GENERAL INFORMATION:
APPLICANT: Schuler, Gerold
APPLICANT: N.V. Antwerps Innovatiecentrum
TITLE OF INVENTION: Improved Transfection of Eucaryotic Cells with Linear
TITLE OF INVENTION: Polynucleotides by Electroporation
FILE REFERENCE: 021505wo/JH/MI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 8, Application US/10267311

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14,

WS-10-890-556-73

Sequence 73, Application US/10890526

Publication No. US20040258708A1

GENERAL INFORMATION:
APPLICANT: Nieland, John
TITLE OF INVENTION: Cytocoxic T-Cell Epitopes of the
TITLE OF INVENTION: Therapy
TITLE OF INVENTION: Therapy
TITLE OF INVENTION: 105/10601

FILE REFRENCE: 50125/03601

CURRENT FILING DATE: 2004-07-13

PRIOR APPLICATION NUMBER: US/10/890,526

CURRENT FILING DATE: 2000-05-02

PRIOR FILING DATE: 2000-05-31

PRIOR FILING DATE: 2000-05-31

PRIOR FILING DATE: 1999-06-01

NUMBER OF SEQ ID NOS: 77

SOFTWARE: FastSEQ for Windows Version 4.0
APPLICANT: Large Scale Biology Corporation
TITLE OF INVENTION: PRODUCTION OF PEPTIDES IN PLANTS AS VIRAL COAT PROTEIN FUSIONS
FILE REPERENCE: N9739
CURRENT APPLICATION NUMBER: US/10/654,200
CURRENT PILING DATE: 2003-09-03

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 27,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 52. Application US/08934915

Patent No. 592412

GENERAL INFORMATION:

APPLICANT: DILLARE, JOAKIM

APPLICANT: DILLARE, LENA

TITLE OF INVENTION: SYNTHETIC PEPTIDES OF HUMAN

TITLE OF INVENTION: PAPILLOMAVIRUS 1, 5, 6, 8,

TITLE OF INVENTION: DIABLE IN 11, 16, 18, 31, 33 AND 56,

TITLE OF INVENTION: DIAGNOSTIC PURPOSES
                                                                                                                                                                                                                                                                                                                                                                          ZIP: 19103-2398
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27,363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              REFERENCE/DOCKET NUMBER: 87

A; Contents: annotation; animal lectin domain homology

C; Comment: Pulmonary surfactant is a complex of phospholipids and proteins that lowers to C; Comment: This protein is a slaidoglycoprotein synthesized by alveolar type II cells. It pendent on the presence of calcium ions.

C; Superfamily: mannose-binding lectin; C-type lectin homology
                                  A, Note: the authors translated the codon TTG for residue 60 as Pro A, Note: part of the sequence, including the amino end of the mature protein, was confirm R, Liau, D.F.; Ryan, S.F. Chem. Chem. Phys. Lipids 59, 29-38, 1991
